

Supplementary Information for:

Chapter 2 | The Genetic Consequences Of Conservation Releases into Existing Wild Populations of Birds and Mammals

This PDF file includes:

Table S2.1

Table S2.1: Search strategy structured using the PICO framework, to identify relevant studies. Title, abstract and keyword searches were undertaken in Scopus, Web of Science and PubMed. Additional filters: AND ("genetic" OR "genomic") AND NOT ("plants"). Boolean operators AND, OR, NOT and * were also used.

PICO element	Purpose	Search Terms
Population	Species/populations of conservation concern	"conserve", "conservation", "management", "manage", "preserv*", "endangered", "vulnerable", "threatened", "fragmented", "small population", "isolated population"
Intervention	Conservation action involving introducing conspecifics into existing wild population	"genetic rescue", "translocat*", "genetic restoration", "reintroduc*", "introduc*", "conservation breeding", "captive breeding", "genetic augmentation", "genetic reinforcement", "assisted gene flow", "evolutionary rescue"
Outcome	Genetic or genomic consequences measured	"genetic variation", "genetic differentiation", "genetic load", "realised load", "epistatic load", "mutation load", "genetic diversity", "extinction", "population structure", "taxonomy", "gene flow", "genetic monitoring", "adapt*", "inbreeding", "inbred", "mutational meltdown", "effective population size", "outbreeding", "outbred", "allele effect", "heterosis", "heterozygosity", "deleterious", "divergence", "genetic incompatibilities", "purg*", "founder", "stochasticity", "hybridis*", "hybrid vigour", "connectivity", "genetic drift", "phylogeograph*", "bottleneck", "outcrossing", "maladapted", "genetic homogenisation", "demographic rescue", "genetic swamping", "admix*", "homozygosity", "isolation by distance", "outlier loci", "conservation unit", "management unit", "evolutionary significant unit", "adaptive unit"
	Discipline filter	"genetic", "genomic"
	Exclusion	NOT "plants"
